

CONSILIENCE

Experience, Capabilities,
and how we work with early Biotechs

September 2026

CONSILIENCE

How we work with early Biotechs

Consilience is a Life Science consultancy based in Munich, founded by Dr. Friederike Winter and Dr. Christian Wasmer in 2025, combining experience from 20 years of work with Biotech companies and 16 years of academic research.

We work **as consultants or fractional leaders** in Pharma and Biotech.

Our **therapeutic area experience** extends across solid tumors, heme-oncology, rare genetic disorders, and neurology (see right-hand side).

Technologies we've worked with include (multi-specific) antibodies, allogeneic and autologous cellular therapies, antibody-drug conjugates, radioligand therapy and -diagnostics, protein degraders, gene therapies.

We offer **limited pro-bono work to early-stage Biotechs** and university spin-outs to help surface, shape, and communicate the full value of their asset or technology to investors and pharma BD&L teams.

Therapeutic Area Expertise

Oncology, solid tumors

- Melanoma
- Prostate
- Breast
- Ovarian
- Bladder
- Lung
- Neuroendocrine

Heme-Oncology

- Multiple Myeloma
- Follicular Lymphoma
- Diffuse Large B-Cell Lymphoma
- Myelodysplastic Syndrome and Acute Myeloid Leukemia

Rare genetic disorders

- Genetic obesity
- Lysosomal storage disorders
- Neurologic disorders
- Rare hematologic

Neurology

- Multiple Sclerosis
- Childhood epilepsies
- Alzheimer's, including AD psychosis

Note: Combined expertise of Friederike Winter and Christian Wasmer

We help you surface, shape, and communicate the full value of your asset

Area of experience	(Pre-)Clinical Strategy	Evidence Planning	Medical Strategy
	Define asset priorities and credible value by defining the path to regulatory approval and reasons for successful uptake by the medical community	Assess evidence gaps and identify efficient and quick data generation activities to support the development program	Detail unmet needs and ensure relevant stakeholder engagement and evidence communication
Common questions we support	• What does the current and future treatment landscape and patient journey look like in the relevant disease area? What are key unmet needs and how will they evolve? Foundational across areas; required level of detail varies • Which lead indication(s) fit your technology, IP, and financial runway? What is the aspirational target product profile needed to be successful there? • What is the expected patient population, market size and pricing potential in your (lead) indication(s)? • How can you design pre-clinical and early clinical development to de-risk your asset and speed up lead indication development? • Who could you partner with to maximize your asset’s impact, e.g., for funding, pivotal clinical trials, and commercialization? • In addition to the clinical program for regulatory approval, what are the evidence requirements for other key stakeholders (e.g., HTA/ market access, physicians, patients)? • How can you best leverage real-world data and existing registries to gain insights most cost-efficiently and timely? • Which upcoming competitor data readouts may impact your asset, and how can you create a resilient development plan? • Who can you collaborate with to generate relevant evidence, e.g., ESR/IIS, registries, etc.? • What is the medical-scientific narrative supported by available data? What is the aspirational narrative to be built through future evidence generation? • Who are key medical stakeholders to involve in (early) communication? Who are the main influencers/ opinion leaders? • <i>Further questions apply for clinical stage companies</i>		

We bring a senior strategic mind into the room: embedded, fractional, and as thinking partners.
We work with a small number of Biotechs at a time, in defined areas, deeply.

CONSILIENCE FOUNDERS

“We work with few clients at a time, in narrow slices, deeply – outside the org chart, no agenda beyond the work. If the fit isn't right, we'll say so.”

Dr. Friederike Winter
Managing Partner

Works across New Product Planning, Evidence Planning, Medical Strategy, and Approval Readiness for Pharma and Biotech, with a focus on oncology, rare disease, and neurology.

Over 8 years experience in advising clients, including at Prescient Healthcare Group (Medical Advisory), EY-Parthenon (Life Science Strategy), and stradoo

Therapeutic area expertise in solid tumors, heme-oncology, rare disease and neuro-immunology

MSc and DPhil (PhD) in Neuroscience from the University of Oxford, with a background in Molecular Medicine (University of Erlangen-Nürnberg)

Dr. Christian Wasmer
Managing Partner

Works across Clinical, New Product Planning, Medical Strategy for Pharma and Biotech clients, with a focus on oncology and rare diseases.

Over 12 years experience in advising clients; previously at Prescient Healthcare Group (Medical Advisory), Trinity Life Sciences (Strategic Advisory), Syneos Health (Advisory), and BCG

Therapeutic area expertise in oncology (heme and solid tumors), and rare genetic disorders

MSc in Physics (ETH Zurich), PhD/Doctorate (ETH Zurich) and PostDoc (Harvard Medical School) in foundational oncology and neurology research

con·sil·ience

the linking together of principles from different disciplines
especially when forming a comprehensive theory¹

Science is at the core of what we do – we understand that even the smallest nuance can make all the difference, and we can join you in the details

Strategy is how we think – we crystallize what is most relevant and exclude what is not, to enable clear decisions and communication

Context is what brings it all to life – we know the best strategy is useless without execution, and we make sure to take the team along and adjust to your specific situation
